Portnox™

Smart Security. Made Simple

Who We Are

Founded in 2007, Portnox provides in-depth insight into the network in real time and helps secure connected organizations with innovative technology that allows CISOs to see, control, react, and manage the risk networks face – for any user, any device, anywhere.

Solutions for the connected organization

The connected world/organization is evolving, every minute and every hour of every day. More devices join the corporate network, including smartphones and tablets and IoT devices of all shapes and sizes, making the network increasingly more complex to manage and protect. With Portnox, you gain 100% actionable visibility and control of all devices connecting to the network.

2,500,000
Devices Protected

Our Customers

Portnox works with over 500 companies – across a wide range of verticals including finance, healthcare, government, technology, education and more.
We pride ourselves on making sure each of our clients is safe and compliant with industry regulations.

4,500,000
Ports Protected

Our Partners

Portnox works with strong technology partners and channel partners that give us a competitive advantage and an opportunity to access a broader range of expertise.

In tandem with our partners, we are building a strong ecosystem to adopt our innovative technology and provide it to customers worldwide – attracting new customers, developing sources of information, and improving current business and IT processes. We view our partners as a key component of our success in helping customers worldwide see, control, and protect their networks against and ever-increasing range of complex cyber threats.

Industry Awards

○ 2017 Cybersecurity Excellence Awards Winner

○ 2017 Cutting Edge Cloud Security Solution CDM Winner

○ 2017 Info Security Products Guide Global Excellence Award Winner

○ 2016 Global Frost & Sullivan Award for Competitive Strategy Innovation and Leadership

Portnox CORE:
The Next-Gen Solution that Keeps Your Network Safe

With Portnox CORE, nothing can hide. As the first Network Visibility and Control Access Management platform that's software-based, Portnox CORE's patented solution allows you to manage the security challenges organizations face by providing 100% visibility. Utilizing an agentless technology that allows you to detect and profile devices in real time on your wired, wireless, VPN, and virtual networks, Portnox CORE provides an additional layer of IoT visibility and offers full capabilities for device discovery, authentication, and compliance enforcement. In the age of IoT and its associated risks, Portnox CORE provides a comprehensive approach that includes:

Ease of Use: 100% visibility with an agentless, centralized system that involves no network changes, no span port, and a simplified UX

IoT Identification: Profiling of IoT devices, segmentation, and blocking suspicious devices

Extensive Ecosystem: Integrations for many security and network infrastructure vendors

Portnox CLEAR:
Cloud-Based Security-as-a-Service

Portnox CLEAR is an advanced security solution that delivers continuous, off and on premises risk monitoring of all of your endpoints, bringing affordable, deployable, and manageable Network Access Management to any sized company as a cloud service. The platform provides absolute visibility and access control by granting access following device profiling based on the device itself, the network, and user identity.

Quick and Intuitive Deployment: With a pre set-up infrastructure, any complicated integration is enabled with a click of a button. Even novice users can complete a deployment.

Continuous Risk Monitoring: Being a cloud solution allows CLEAR to monitor the risks and "health" of corporate and personal assets, all the time, anywhere.

Risk Adaptive Access over the VPN: Portnox CLEAR offers a two-factor authentication approach over VPN, enabling access based both on the user's identity and on the device risk score.

Ensuring the Security of Your Network

Unlike many traditional Network Access Management platforms that rely on port mirroring, IP range scans, inventory directory or other passive methods that are not happening in real time, Portnox gains visibility by directly connecting via native protocols to your network infrastructure including switches, WLC, VPN, and virtual. Portnox provides real-time, immediate awareness of network changes and ensures the security of your network that involves:

○ Agentless architecture

○ Incident response capabilities

○ Software-based solution

○ Multi-factor verification

○ Vendor agnostic approach

Portnox:
Why Take Chances?

With Portnox, your network is continuously monitored and secure. Portnox saves you time and money with real-time visibility and control of all devices connecting to your network, through a platform that works for all businesses, regardless of scale. The first software-only NAC solution, Portnox is rapidly deployed and gives you the anytime, anywhere knowledge and tools you need to secure the network in the age of IoT. With Portnox, you can:

○ **See** – 100% of devices on the network in real time, including all IoT devices

○ **Control** – access through segmentation of the network according to IoT device type or group

○ **Automate** – actions, reducing the time and cost associated with manual responses
